

Amendments to the Abstract:

Please replace the paragraph beginning at page 7, line 2, with the following rewritten paragraph:

-- A cleaning system includes a sealed up body, a cleaning mechanism, and a
5 combination of a substrate and a frame layer arranged on the substrate to form a
chamber together with the substrate. The sealed up body is formed with a
cleaning room. The substrate is disposed in the cleaning room and fixed to an
upper portion of the sealed up body with the chamber facing downwards. The
cleaning mechanism, which is disposed in the cleaning room of the sealed up body,
10 ejects a cleaner slantingly upwards to clean the chamber of the combination of the
substrate and the frame layer. ~~mechanism for an image sensor package, the~~
~~cleaning mechanism a seal up body is formed with a cleaning room. A substrate~~
~~formed with frame layer is fixed on the top end of the cleaning room, then, the~~
~~chamber of the substrate being faced down direction from the cleaning room. A~~
15 ~~cleaning device is mounted on the bottom end of the cleaning room for cleaning~~
~~the chamber of the substrate by cleaner. --~~
